

Report
Of
CodeAlpha Frontent Development Virtual Internship

Submitted To

School of Computer Science and Engineering
IILM University, Greater Noida, U.P.

In partial fulfilment of the requirement of degree of
B.Tech (Computer Science and Engineering)

By

Roll Number of Student: 25SCS1003004521

Name of Student: TASLIM KHAN

Batch: 2025-2029

1. CANDIDATE'S DECLARATION

I, TASLIM KHAN, hereby declare that the internship report titled “Frontend Development Internship at CodeAlpha” has been completed by me to fulfil the requirement for the award of the degree of Bachelor of Technology in Computer Science and Engineering. The work described in this report is based on the practical projects completed during my internship. All external references used for general background information have been acknowledged in the references section. I affirm that this report has not been submitted to any other institute for any degree or diploma requirement.

Signature:-

Student Name: TASLIM KHAN

Roll No.: 25SCS1003004521

2. ACKNOWLEDGEMENT

I am using this opportunity to express my gratitude to everyone who supported me throughout my CodeAlpha internship program. I am thankful to my university, faculty members and mentors for their guidance and encouragement during the internship.

I am also grateful to CodeAlpha for providing an opportunity to work on practical frontend development projects. The internship allowed me to apply HTML, CSS and JavaScript concepts while building a personal portfolio website and a functional calculator.

Finally, I express my gratitude to my parents and everyone who encouraged me during the completion of this work.

Signature:-

Student Name: TASLIM KHAN

Internship Offer Letter

INTERNSHIP OFFER LETTER

Date: 31st July 2026

Student ID: CA/DF1/229940

Name: Taslim Khan

Welcome to CodeAlpha

Congratulations! We are delighted to make you an offer as **Frontend Development internship** offer letter is to confirm your selection **Frontend Development internship** at **CodeAlpha** and welcome you for the same effective from 1st August 2026 to 30th August 2026. Hope you will be doing well.

This Internship is observed by CodeAlpha as being a learning opportunity for you.

Your internship will embrace orientation and give emphasis on learning new skills with a deeper understanding of concepts through hands-on application of the knowledge you gained as an intern. You will acknowledge your obligation to perform all work allocated to you to the best of your ability within lawful and reasonable direction given to you.

We look forward to a worthwhile and fruitful association which will make you equipped for future projects.

Wishing you the most enjoyable and truly meaningful internship program experience.

Sincerely,

Swati Srivastava

4. PROJECT DESCRIPTION

4.1 Introduction

This report presents the work completed during the Frontend Development Internship at CodeAlpha from 1 July 2026 to 30 July 2026. The internship was focused on practical frontend development using core web technologies. Two projects were completed during the internship: a Personal Portfolio Website and a Web Calculator.

The internship provided practical exposure to structuring web pages using HTML, designing user interfaces using CSS, and adding interactivity and functionality using JavaScript. It also provided experience in organizing and publishing source code through GitHub.

4.2 Organization Profile

CodeAlpha is a technology internship and learning platform that provides virtual, assignment-based internship programs. The internship program focuses on practical project development and provides students with an opportunity to apply their technical knowledge to real-world style tasks.

During the Frontend Development Internship, the work focused on developing browser-based projects using technologies such as HTML, CSS and JavaScript. The internship helped in developing practical knowledge of frontend development and improving problem-solving and implementation skills.

4.3 Problem Statement

The main objective of the internship was to apply basic frontend development concepts to create functional and user-friendly web applications.

The first project, Personal Portfolio Website, was developed to create a professional webpage for presenting personal information, skills, projects and contact details.

The second project, Web Calculator, was developed to create an interactive calculator capable of performing basic arithmetic operations through a simple and user-friendly interface.

These projects provided practical experience in converting requirements into working frontend applications.

4.4 Project Objectives

The main objectives of the internship projects were:

- To develop a practical understanding of HTML5 and webpage structure.
- To use CSS for designing attractive and responsive user interfaces.
- To use JavaScript for adding functionality and user interaction.
- To develop a personal portfolio website.
- To develop a functional web-based calculator.
- To practice testing and debugging frontend applications.
- To organize and publish project source code using GitHub.
- To improve problem-solving and frontend development skills.

4.5 Scope of the Project

The scope of the internship was focused on frontend web development and browser-based applications.

The Personal Portfolio Website includes sections such as About, Skills, Projects and Contact. It provides a simple platform for presenting personal information and technical skills.

The Web Calculator provides a user interface for entering numbers and performing arithmetic operations such as addition, subtraction, multiplication, division and percentage. It also includes controls such as Clear, Delete, decimal input and Equals.

Both projects are client-side applications developed using HTML, CSS and JavaScript. No backend server or database was used in these projects.

4.6 Technologies and Tools Used

HTML5:

HTML5 was used to create the basic structure and content of the webpages. It was used for creating headings, sections, buttons, navigation elements and other webpage components.

CSS3:

CSS3 was used to design and style the webpages. It was used for layouts, colors, spacing, typography, buttons and responsive design.

JavaScript:

JavaScript was used to add interactivity and functionality to the projects. It was mainly used for handling user interactions and implementing the calculator operations.

GitHub:

GitHub was used for storing, organizing and publishing the project source code. The completed projects were maintained in public GitHub repositories.

Visual Studio Code:

Visual Studio Code was used as the development environment for writing and editing HTML, CSS and JavaScript files.

Web Browser:

A web browser was used to run and test the projects and to verify their functionality and user interface.

4.7 System Architecture

Both projects follow a simple client-side architecture consisting of three main layers:

1. HTML – Structure Layer

HTML is responsible for creating the structure of the webpage. It defines the different sections, headings, buttons, content and other elements required by the application.

2. CSS – Presentation Layer

CSS is responsible for the visual appearance of the applications. It controls the layout, colors, fonts, spacing, buttons and responsive behavior of the webpages.

3. JavaScript – Behavior Layer

JavaScript is responsible for adding functionality and interaction to the applications. It handles user actions and performs the required operations.

The browser loads the HTML, CSS and JavaScript files and renders the complete application for the user.

4.8 Methodology

The following methodology was followed during the development of the projects:

1. Requirement Analysis

The requirements and functionality of each project were identified before starting the implementation.

2. Interface Design

The basic layout and user interface of the Portfolio Website and Calculator were planned according to their requirements.

3. Implementation

HTML was used to create the structure, CSS was used for styling and JavaScript was used to implement functionality and interaction.

4. Testing

The projects were opened in a web browser and tested to verify their layout, functionality and user interactions.

5. Debugging

Errors and issues found during testing were identified and corrected to improve the functionality and appearance of the projects.

6. GitHub Publication

After completing the projects, the source code was organized and uploaded to GitHub repositories for project presentation and accessibility.

Project 1: Personal Portfolio Website

The Personal Portfolio Website is a single-page frontend website developed to present personal information and technical skills in a professional manner.

The website contains a navigation header and different sections including About, Skills, Projects and Contact. The project uses HTML for webpage structure, CSS for styling and layout, and JavaScript for client-side functionality.

The project files include:

- index.html
- style.css
- script.js

Project 2: Web Calculator

The Web Calculator is a browser-based application developed using HTML, CSS and JavaScript. It provides a simple interface through which users can enter numbers and perform basic mathematical calculations.

The calculator includes buttons for addition, subtraction, multiplication, division, percentage, decimal input and equals. It also provides Clear and Delete controls.

The project files include:

- index.html
- style.css
- script.js

4.9 Expected Outcomes

The expected outcomes of the internship were:

- Improved understanding of HTML webpage structure.
- Improved knowledge of CSS styling and layout.
- Practical experience with JavaScript and user interaction.
- Ability to develop small frontend applications.
- Improved testing and debugging skills.
- Better understanding of project organization.
- Experience in using GitHub for storing and presenting source code.
- Improved problem-solving and frontend development skills.

4.10 Certificates of Completion and Other Communication Proof

The CodeAlpha Internship Certificate confirms successful participation in the Frontend Development Internship from 1 August 2026 to 30 August 2026. The certificate was issued on 1 September 2026.

A copy of the internship completion certificate is attached with this report.

The university report format also requires communication mail proof where applicable. The relevant communication proof should be attached if required by the evaluator
